

Why should I **Vaccinate my Horse?**

By vaccinating your horse you are helping to protect other horses

To prevent
unnecessary suffering

To prevent
unplanned expenses

Prevent loss
of use

To prevent
yard closures

To prevent the
spread of diseases

To help achieve
herd immunity

My horse doesn't need to leave the yard so do I need to vaccinate?

Yes especially if your horse has any contact with other horses. In 2019 there was a large 'flu' outbreak in the UK, although such outbreaks are uncommon, it reminded us of the importance of vaccinating for flu in all horses. The disease is debilitating for your horse and can be distressing for you to witness. A horse doesn't need to leave home to be at risk of tetanus and most cases of tetanus are fatal.
