

Protect Everyday Adventures.

Don't Wait, Vaccinate!

Is your pet at risk?

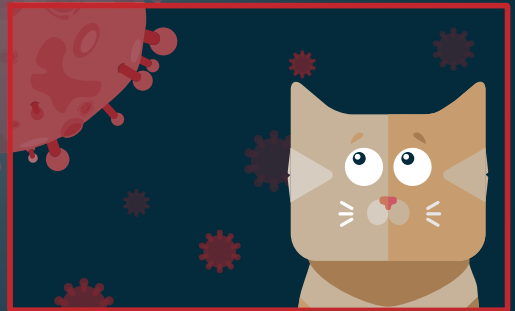

Whether it's a morning stroll,
a dip in the river, or a play date
with their best friend...

Your pet's everyday adventures
are full of ways they can catch
life-threatening diseases.

Unvaccinated dogs and cats are
at risk, with many diseases
being fatal and some even
affecting humans.

Whether they're young or old,
vaccinating them every year is
the best way to **protect** them.

Speak to us about vaccinating today.
